

For Immediate Release

BAF Expands CNG Sales and Service Capacity through Baker Partnership
Four additional plants in the east double upfit capabilities

DALLAS, Texas – July 30, 2008 – BAF Technologies, the premier provider of natural gas vehicle upfits, today announced a partnership with Baker Equipment to provide conversion capacity in the eastern United States. The agreement will enable BAF to expand its sales, marketing and upfit presence in the region while providing Baker with an opportunity to expand operations in multiple facilities.

The facilities in Richmond, Virginia, Raleigh, North Carolina, Pottstown, Pennsylvania and Atlanta, Georgia will be leveraged to provide upfit services for BAF. Baker employees will be trained and certified by BAF to complete CNG upfits according to BAF specifications. Baker will also be trained to perform warranty and service work, making it easier for customers in the region to obtain service.

“We are obviously excited about the partnership,” says John Bacon, BAF’s president. “Baker will be a great partner and this will only help our customers. We will be able to increase our throughput while providing a regional presence.”

“We are excited not only about this expanded partnership, but also the industry as a whole,” says Skip Baker, president, Baker equipment. “This agreement pairs two industry leaders together to provide high quality CNG vehicles to a growing market.”

BAF will empower Baker’s employees to install and service BAF’s proprietary CalComp fuel system. Additionally, Baker will invest resources in marketing the joint vehicle products in the eastern US.

About Baker Equipment
